Tube shields for polishing

The tube shields are realized in a special synthetic material called « ULTIX » with extreme performances.

- **Outstanding thermal stability allowing resistance to temperatures from -200°C to +200°C**
- **Virtually whole chemical inertia notably towards the metals' dampness**
- **Non aggressive surface quality while in contact with sensitive parts**
- **Very high anti-static and anti-sticky characteristics - a complete incombustibility**
